## Cognex PreAligner Head OS2000 Assembly

Our Cognex Prealigner Assembly<sup>1</sup> for your Micralign<sup>TM</sup> employs a camera that is able to view the entire wafer, thus eliminating the discrete detectors (A-D). Teamed with our OS2000 Operating System, this allows for:

- Transparent or semi-transparent substrates
- Alternate flat orientations
- Multiple size handling (for Combo machines)
- Center-based PreAlignment
